

Stalosan® Skin Repair

Wound-protection ointment

Round the clock effective protection of wounds

Stalosan Skin Repair has been developed as a liquid bandage which dries out quickly and forms a protective layer over the wound. It provides favorable conditions for faster skin recovery and protects wounds from infection.

Stalosan Skin Repair is suitable for all domestic livestock

Stalosan Skin repair is a unique wound-protection ointment providing visible results from:

- Defects caused by ring worm and leg mange
- Mechanical wounds and scratches
- Wounds on shoulders, ears and flanks

The pH of Stalosan Skin Repair is similar to healthy animal skin and effectively protects wounds from irritating impacts of ammonia and other harmful substances, shortening the period of wound healing.

Apply in 3 easy steps:

- 1) Wash off the wound with soap and water, then pat dry (cleaning the wound is only needed prior to the first application)
- 2) Apply a thin layer directly onto the wound
- 3) Re-apply daily as long as needed, or until wound disappears
