

AviPlus® S

AviPlus®S is a microencapsulated blend of citric and sorbic acid, thymol and vanillin intended for swine.

Efficacy

Organic acids and botanicals have well-known antimicrobial activity and they can positively modulate gut microflora. The active ingredients in AviPlus®S demonstrated to be effective as gut modifier and to improve the weight gain and feed conversion efficiency in pigs along the whole rearing cycle.

Target

All the Vetagro solutions for swine offer protection adapted to the digestive capacity these animals. Our microencapsulation technology ensures a specie-specific particle size distribution that allows the slow release of the active ingredients along the whole intestine.

Protection

As organic acids and botanicals are strongly degraded at the gastric level, AviPlus®S active ingredients are microencapsulated in a lipid matrix and can become available at the intestinal level. A correct management of the gut environment can contribute to improve animal general health status and live performance.

Improved live performance of pigs fed AviPlus®S

Meta-analysis of 4 studies (42 days each, total of 720 weaned piglets) that compared diet with AviPlus®S at 1.0 kg/MT of feed and a control diet.

9 studies comparing live performance of animals fed AviPlus®S at 1-3 kg/MT of feed or the control diet. The graph shows the improvement in FCR and BW compared to a control diet in post-weaning pigs.

P = *P=0.05, **P<0.0001

Vetagro is a progressive, science-based company, specializing in feed additive development and production. Since 1982, our headquarters in the Italian food valley and our subsidiaries around the world have been delivering high-tech, innovative and cost-effective solutions in line with the needs of the modern animal feed industry.
